Manufacturer:

AMG Software Module Punch Monitor

Description

Punch Monitor is a special built-in screen which can be integrated with all real-time terminals for displaying certain information, including employee's name and photo, right after punching. If you keep the Punch Monitor screen open, all of the punches will be transferred to the database in real-time mode. This will allow you to see the most updated data without manually polling.

If you are using a proximity card system, Punch Monitor may help you eliminate buddy punching. The photo of the employees during punch time will be displayed.
